

## CLAIMS

1. A textile protective material, made of multiple material layers, characterized in that at least one material layer is a flame-resistant and/or flame-repellent material and at least one further material layer is a cut protection material, and/or a bulletproof or stabproof material.
2. The textile protective material according to Claim 1, characterized in that the flame-resistant and/or flame-repellent material is implemented as a fire and melt protection.
3. The textile protective material according to Claim 1 or 2, characterized in that the cut protection material is positioned over a textile base material on the machine side in a way known per se as a layer made of lining threads and loops, which blocks the tool in case of contact, for protection against injuries through motorized tools such as chainsaws or circular saws.
4. A garment as a cut protection garment such as cut protection leggings, trousers, overalls, jacket, vest, or protective suit, characterized in that it is implemented from a textile protective material according to one of Claims 1 through 3.
5. A use of a textile protective material according to one of Claims 1 through 3 for implementing a protective garment.
